

# Fruitvale Sanando Juntos Community COVID-19 Testing 9.26 – 9.27

## Executive Summary

- A broad coalition of community partners tested nearly 1200 participants in the Fruitvale neighborhood of Oakland, CA on the weekend of 9/26/2020 using a test and respond model
- While only 62% of those tested were Latinx, 95% of those testing positive identified as Latinx
- Results indicate that the Fruitvale community faces widespread economic distress and health inequities
  - Over 20% of Fruitvale participants lack a regular place of medical care and/or were uninsured
  - Nearly 40% of all participants experience food insecurity
- Within the Latinx community, the Mayan population is the most vulnerable
  - The Mayan Latinx community had higher PCR and antibody prevalences than non-Mayan Latinx
  - Mayan Latinx community experiences over 20% higher levels of food insecurity than non-Mayan Latinx

## Recommendations for action

Fruitvale Latinx communities face urgent need for...

- Targeted public health outreach to marginalized Latinx and Mayan communities
- More COVID-19 testing and contact tracing to identify cases and provide resources to households
- Economic relief
  - Food and housing assistance
  - Income replacement for workers required to quarantine

PCR (active infection)
